

# Specialized Disinfecting Services

Midwest Maintenance is a leader in providing facilities with purified environments, including hospitals, clinics, event centers, industrial and governmental facilities, and commercial buildings. Keeping people healthy, safe and productive is an obsession for Midwest Maintenance and this is achieved via comprehensive and consistent janitorial services as well as specialized disinfecting services. These services can be combined for layered, cohesive protection of your clients and employees or can be provided ala carte as may meet your particular needs.

## **Touch Point Cleaning**

Every common touch point is disinfected with cleaning agents that are certified to kill viruses, bacteria and germs. Common touch points include door handles and push bars, water fountains, bathroom surfaces, light switches, elevator buttons, stairwell handrails, breakroom surfaces and sinks, etc.

## **Day Porter**

While normal janitorial cleaning is highly effective, the janitorial team cannot be on site 24/7 to catch every potential contamination. A day porter is an essential presence who can continually hit hot spots such as door handles and restrooms as well as making sure bathrooms are continuously well stocked.

Keeping  
people  
healthy,  
safe and  
productive

### **SWAT Team Detail Cleaning**

A comprehensive level of touch point cleaning ensures every spot that someone could touch is disinfected. Areas include phone mouthpieces, keyboards, entire chairs, entire doors and door frames, photocopier load trays and control pad, under desks, TV remotes, mini blind handles, and every other conceivable touch point.

### **Air Scrubber**

Champions clean, fresh and purified air throughout an entire facility. Goes to work immediately to remove 99.97 to 99.99% of offensive odors, dangerous airborne contaminants, gases, vapors and mold. Air Scrubber's feature a triple-stage filtration system, and the filters include a DOP certified H13 HEPA and G4 Pleated Media Filter.

### **ULV Fogger/Mister**

Reduces or eliminates microorganisms such as viruses, bacteria, fungus, mold and mildew. The fog covers everything, disinfecting and deodorizing at the same time. Ultra Low Volume (ULV) sprayer's mist hangs in the air before settling on and disinfecting the objects in the room.

### **Electrostatic Technology**

State-of-the-art electronic sprayers are paired with a portfolio of highly effective disinfectants and sanitizers to ensure all surfaces (including hard to reach/clean areas) are properly treated. The technologically superior nozzles deliver a reliable atomization and particle size resulting in outstanding wraparound coverage on all sides of target areas.

**We would like to partner with you. Call Midwest Maintenance at 402.733.1114, or email [service@midwestinc.net](mailto:service@midwestinc.net). Find out how a partnership with Midwest Maintenance ([midwestinc.net](http://midwestinc.net)) can be a beneficial one!**
